

Common Precautions after Receiving Vaccination

Precautions

1. Stay at the medical institution where your child has received vaccination for about 30 minutes after the vaccination and observe your child and mental condition or keep yourself ready to contact your doctor whenever any reactions occur. Side-effect reactions may suddenly occur during this period.
2. Please be cautious if side effects occur during 4 weeks after vaccination by live vaccine or during 1 week after vaccination by inactivated vaccine.
3. Please keep the injection site clean. There is no problem in putting your child in a bath, however, please don't rub the injection site.
4. Please avoid intense exercises on the day of vaccination.
5. Please visit a doctor immediately if you notice any abnormal reaction at the site of injection or if your child's health condition changes after receiving vaccination.
6. After receiving vaccination, please check your Mother and Child Health Hand Book. The Mother and Child Health Handbook shows important record on receiving vaccination, so please keep it safe.

※For detailed information on side-effects of different vaccines, please check the pamphlet "Vaccination and children's Health".
